

Remember our 1994 album [*Double The Phat and Still Tasteless*](#) ?

A few months ago I was getting food for our cat. She's 19 years old, and like many old cats her kidneys are failing so she needs low-protein cat food. The problem is, low-protein cat food apparently doesn't taste very good. So we experimented with a few different brands, and I lucked into a cheaper brand at a close-out store. Problem was, while its protein content was about equal to the expensive brands from the vet, the fat content was half as much, and I figured that would mean it would taste worse. Surprisingly, our cat preferred it, which prompted my comment:

"Huh -- the food from the vet has double the fat, but it's still tasteless."

Never expected to use that phrase in my everyday speech. Yet, here we are.
